DETAILED ACTION

This Office Action is in response to patent application S/N: 10/672,686, filed on 09/26/2003. Claims 1- 26 are pending in the action.

Drawings

The Drawings filed on 09/26/2003 are acceptable for examination.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-26 are rejected under 35 U.S.C. 102(e) as being anticipated by Schaumont et al, US patent application publication no. US 2003/0216901.

As per claim 1, Schaumont anticipates a method and system for generating and verifying a description of the digital system with feature limitations very identical to the claimed invention. According to Schaumont, the system includes means and steps

Obtaining instructions representative of compiling a netlist or a topology of the system and relationship among system parameters ([0116], [0508]-[0540]),

Executing the instruction by reading a data structure containing a plurality of parameters to create an intermediate representation of the system ([0045]-[0050]).

As per claim 2, Schaumont anticipates parameters contained in the data structure such as wordlengths, timing, communication ports, etc.

As per claims 3-4, Schaumont anticipates steps of identifying circuit netlist or circuit topology ([0266]) and verifying signal flow or timed clocked simulation to match with the instruction compilation of the circuit netlist, signal flow graph or circuit topology ([0037], [0219], [0267], [0316], [0325]-[363], [393], [0506], [520]).

As per claim 5-12, Schaumont anticipates data structures, without recompiling the circuit netlist or topology, C language, etc.

As per claim 13, Schaumont anticipates a method and system for generating and verifying a description of the digital system with feature limitations very identical to the claimed invention. According to Schaumont, the system includes means and steps

Obtaining instructions representative of compiling a netlist or topology of the system and relationship among system parameters for the simulation or verification ([0116], [0508]-[0540]),

Executing the simulation instruction by reading a data structure containing a plurality of parameters to create an intermediate representation of the system ([0045]-[0050]).

As per claim 14, Schaumont anticipates steps of directly compiling without recompiling after a content of the data structure is modified ([0056], [450]-[547]).

Similarly, claims 15-26 are directed to the method and system with limitations like in the rejected base claims above. Claims 15-26 are also rejected in like manner.
